#### Problem 1 Statement

Example 1 [Kudela]

"Oil, with  $\rho = 900 \text{ kg/m}^3$  and kinematic coefficient of viscosity  $\nu = 0,00001 \text{ m}^2/\text{s}$ , flows at  $q_v = 0.2 \text{ m}^3/\text{s}$  through 500 m of 200-mm diameter cast-iron pipe. Determine the head loss."

### Solution 1

```
# Please note that the Re2, f2, f3, f4, f5, f6, f7, f8, and the colebrook
# functions are found within the iemisc R package created by Irucka Embry

# oil iron-cast pipe find the friction loss -- the head loss is 117 meters

# given the water flow of 0.2 m^3/s create a numeric vector with the units of
# cubic meters per second for the volumetric flow rate

Vdot <- set_units(0.2, m^3/s)

Henryk Kudela calculated 117 meters for the head loss.

## 5

#### Problem 2 Statement

Example 1 [Subramanian]

Find the head loss due to the flow of 1,500 gpm of oil ( $\nu = 1.15 \times 10^{-4} \text{ ft}^2/\text{s}$ ) through 1,600 feet of 8" diameter cast iron pipe. The density of the oil  $\rho = 1.75 \text{ slug/ft}^3$ .

"For cast iron,  $\epsilon = 8.5 \times 10^{-4}$  ft."

#### Solution 2

```
# Please note that the Re2, f2, f3, f4, f5, f6, f7, f8, and the colebrook
# functions are found within the iemisc R package created by Irucka Embry
# oil cast iron pipe find the head loss -- the head loss is 83.7 feet
